Sara JI-LO

Data & AI Engineering Student — Jlo.saa12@gmail.com • +33 6 44 86 30 22 • Paris • Open to V.I.E. • Available Oct. 2027

Engineering student with hands-on BI and digital transformation experience in the pharmaceutical industry and a solid understanding of commercial and compliance processes. **Seeking a V.I.E. to turn data and AI into business value across international teams.**

PROFESSIONAL EXPERIENCE

Ipsen Pharma, Paris — Data Apprentice (Business Intelligence & Compliance)

September 2024 – September 2027 (ongoing) • Global biopharmaceutical company (oncology, rare diseases, neuroscience)

- Migrating legacy Excel dashboards to Power BI (KPI selection, data preparation in Databricks) on a cross-functional PMO project with Business, Procurement and IT teams, from Agile (Scrum) sprints to UAT testing.
- Assessing digital tools (e.g., ticketing, AI agent creation), providing user support and proposing workflow improvements.
- Supporting Compliance teams in their processes (HCP transfer-of-value disclosure, anti-gift rules), working with IT teams in India.
- Ensuring data quality and reporting reliability across BI and Compliance projects.

King Mongkut's University of Technology North Bangkok (KMUTNB), Thailand — Data Science & Machine Learning Intern

June 2026 – September 2026 • International mobility (12 weeks), College of Industrial Technology

- Led end-to-end an AI fault-detection project on unlabeled power-transformer gas data (DGA: 4,500+ samples, 600+ transformers).
- Built the Python pipeline (data cleaning, feature engineering) and compared four unsupervised anomaly-detection models (Isolation Forest, LOF, One-Class SVM, Autoencoder) using ROC-AUC, PR-AUC and Precision@n.
- Designed an original method combining the models with domain knowledge, outperforming every individual model on fleet risk ranking, and delivered a Streamlit dashboard for maintenance prioritization.

INSIGNIAM (Elixirr), Paris — Intern — International consulting firm

July 2023

- Processed data for a LinkedIn marketing campaign and worked with internal databases (JAMF).
- Supported logistics for an international consulting seminar.

EDUCATION

ESME Sudria — Engineering School (2022 – 2027)

Major: Information Systems Architecture & Data

Relevant coursework: Machine Learning • Information Systems Architecture • NoSQL/SQL • Cloud Computing • Database Administration • DevOps • Programming • Enterprise Networking • Cybersecurity • Agile Methodologies

BAFA — Youth Leadership & Animation Certificate (France) — Summer Camp Leader, 2022

ACADEMIC PROJECT

MIA — Multi-agent AI Team Assistant — Master's final-year project — team of 2

October 2026 – March 2027 • Python · FastAPI · React · Microsoft Graph (Outlook, Planner, SharePoint) · LLM API · scikit-learn · LightGBM

- Building a standalone web platform of AI agents, connected to Microsoft 365, for each team member and their manager: task tracking with a remaining-time regression model, private Outlook email triage, automated weekly reports and a manager agent answering questions on project status.
- Research contribution — actionable early warnings: backtested forecasts with conformal prediction intervals flag at-risk milestones, then the agent simulates corrective scenarios (reassign, reorder, reschedule) and proposes the best one to the manager.
- Privacy by design (GDPR, AI Act): confidential data analysis where the LLM only sees the file schema and writes code run locally; natural-language edits of SharePoint documents with preview, human validation and versioning.

TECHNICAL SKILLS

Pharma Domain: Commercial operations (sales & performance analysis) • Healthcare compliance (transfer of value) • KPI design
Microsoft Power Platform & Azure: Power BI • Power Query • Power Automate • Power Apps • Azure
Data & Analytics: Databricks • SQL Server • data cleaning & pipelines • data validation • Streamlit / Plotly dashboards
Business Tools: Salesforce CRM • Microsoft 365 (Outlook, Teams, SharePoint, Planner) • Excel • PowerPoint • Canva
Programming & Cloud: Python • SQL • JavaScript (Node.js) • Microsoft Graph API • Docker • Git/GitHub • AWS (basic)
Machine Learning: scikit-learn • anomaly detection • feature engineering • model evaluation (ROC-AUC, PR-AUC)
AI: AI agents • LLM APIs • ChatGPT • Claude • Microsoft Copilot
Methodologies: Agile (Scrum) • Sprint planning & reviews • UAT testing

SOFT SKILLS, LANGUAGES & INTERESTS

Soft skills: Business acumen • Stakeholder management • Autonomy • Adaptability • Teamwork • Cross-cultural communication • Curiosity
Languages: French — Native (Voltaire Certificate) • English — B2 • Spanish — A2 • Chinese — Beginner
Interests: Violin (orchestra) • Choir • Travel • Asian culture • Humanitarian association (school project in Madagascar, 2024)
